Products

- PyroEdge™ Fire Protective Glazing—20/30 minute fire rating, without hose stream
- Schott PYRAN® Ceramic Fire Protective Glazing—20 through 180 minute fire ratings
- Pyrobel® Fire Resistive Glazing—fire ratings from 45-120 minutes, including 60- and 120-minute transparent walls
- Quick-Frame™—quick and easy on-site frame construction
- StileLite™ Framing and Doors—60-minute, modular framing system
- 7000 Series™ Framing and Doors—curtainwall system for 120-minute walls
- Vision 60 System™—unique and exclusive 60-minute, butt-glazed transparent wall

InterEdge Technologies, and AGC Company, grew out of an idea. One that is centered on service to the architectural glass and glazing industries offering excellent, field-proven products, fast distribution and extremely competitive pricing. Our full line of products can be used where building codes require a specific level of fire and safety protection, and where natural light and visibility are desired - from full lite wood and steel doors to large expansive windows and complete “transparent wall” systems.

Fire rated glass in construction projects has advanced light years in the last decade. Now there are virtually no limits in size and code limitations when used properly. Today, an open and aesthetically pleasing environment is at the will and imagination of the designer.

InterEdge offers a range of products to meet virtually every design requirement. Many of these may be insulated with other products for reduced solar radiation, design or viewing criteria such as one-way mirrors.
